Professional Summary

Computer Science undergraduate at IIIT Kottayam with strong foundations in Data Structures & Algorithms, software engineering, backend development, and databases. Experienced in building full-stack applications using C++, TypeScript, React.js, Node.js, Express.js, and MongoDB, with hands-on experience in AI/LLM and Retrieval-Augmented Generation systems. Solved 500+ coding problems across LeetCode and GeeksforGeeks, with a strong focus on algorithmic problem solving, backend engineering, and building reliable real-world software.

Technical Skills

Languages: C++, Python, JavaScript, TypeScript, C
Software Development: React.js, Next.js, Node.js, Express.js, REST APIs, Tailwind CSS
Backend & Security: JWT Authentication, OAuth 2.0, Zod, Multer, API Development
Databases: MongoDB, Mongoose, SQL, Supabase, Aggregation, Indexing
AI & Data: LLMs, RAG, LangChain, ChromaDB, Hugging Face, NumPy, Pandas
Tools & Platforms: Git, GitHub, Docker, Postman, Vercel, Render, Streamlit
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

Projects

LeetCode Clone Jul 2025 – Aug 2025
GitHub Repository

Next.js ů TypeScript ů Tailwind CSS ů Firebase ů Monaco Editor

- Developed a full-stack coding platform for browsing programming problems, writing solutions, and simulating online submissions.
- Integrated Monaco Editor to provide an in-browser coding environment with test-case validation, authentication, and progress tracking.
- Designed responsive interfaces and reusable components for a seamless coding experience across devices.

FinTrack – Personal Finance Tracking Platform Jul 2025 – Aug 2025
GitHub Repository

React.js ů Node.js ů Express.js ů MongoDB ů JWT ů TypeScript

- Built a full-stack financial management platform for tracking income, expenses, budgets, and financial analytics with JWT-based authentication.
- Designed MongoDB schemas and aggregation pipelines for category-wise analysis and monthly financial summaries.
- Implemented complete CRUD workflows, CSV import/export, and responsive analytical dashboards using React.js and Tailwind CSS.

Second Brain – Knowledge Management Backend May 2025 – Jun 2025
GitHub Repository

Node.js ů Express.js ů TypeScript ů MongoDB ů JWT

- Developed a RESTful backend for securely storing, organizing, and sharing digital content with JWT-based authentication.
- Designed Mongoose data models for users and content management with public sharing through unique hash-based links.

Achievements

- Solved **500+ Data Structures & Algorithms problems** across LeetCode and GeeksforGeeks, covering Dynamic Programming, Graphs, Trees, Greedy, Binary Search, and other core algorithmic patterns.
- Selected for the **Infosys Digital Specialist Engineer (DSE)** role through **HackWithInfy**.

AI / Engineering Experience

- Built an end-to-end **Retrieval-Augmented Generation (RAG)** pipeline covering document ingestion, chunking, embeddings, vector storage, and semantic retrieval.
- Worked with **LangChain, ChromaDB, Hugging Face embeddings, and LLM APIs** to develop AI-powered information retrieval workflows.

Education

Indian Institute of Information Technology, Kottayam Aug 2023 – May 2027
Bachelor of Technology in Computer Science and Engineering

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks
